

Current Flow Matching baseline vs Wolff | L=32 | Euler 50 steps
128 saved FM samples; 1,024 fresh Wolff samples at matched temperature

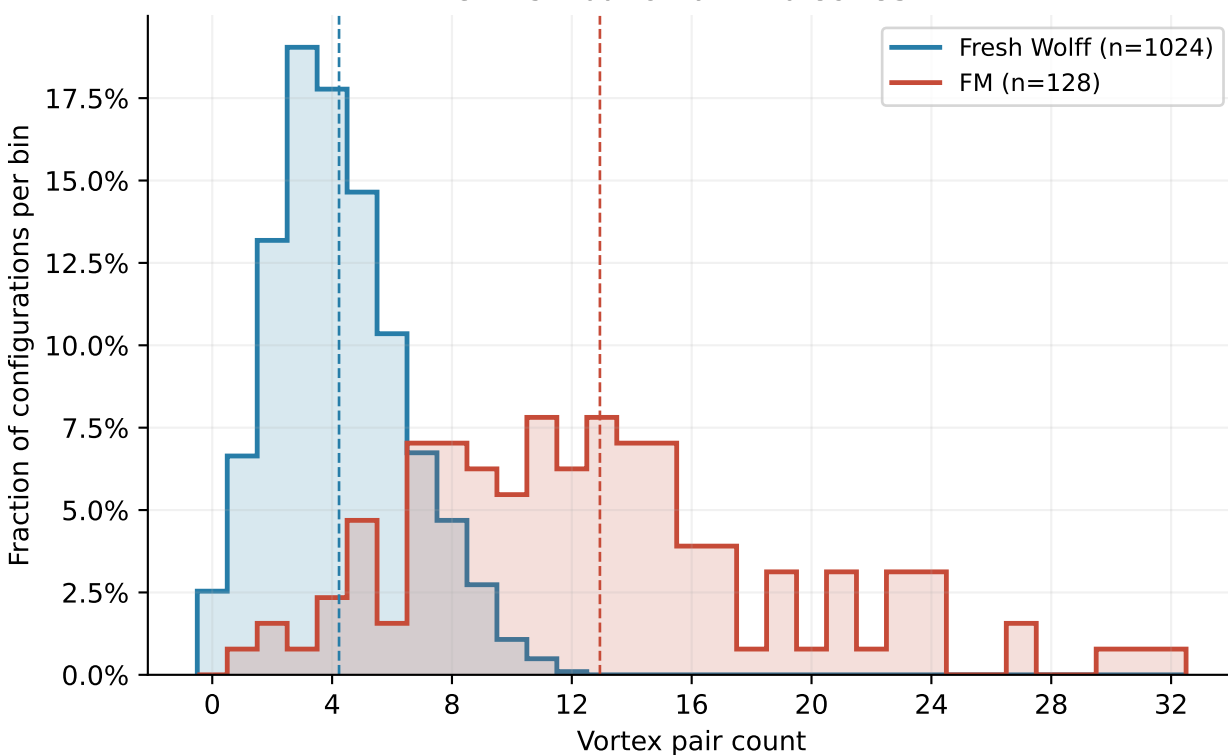

A Vortex pair count across temperatures

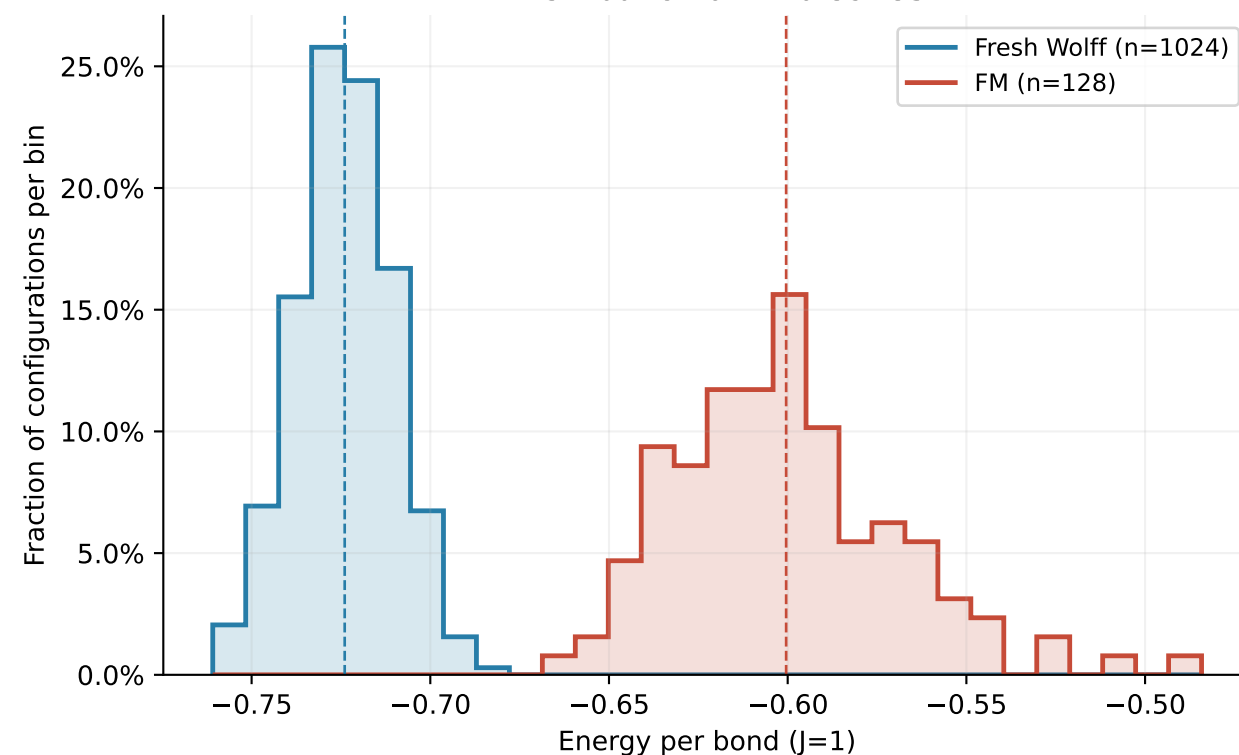

B Energy per bond (J=1) across temperatures

C Distribution at T=0.892857

D Distribution at T=0.892857

Pair count = $(N_+ + N_-)/2$; no bound-pair identification. Dashed histogram lines mark means. No acceptance rate inferred.
