

Data-free XY SPS | L=4, N=32 | three paired training budgets

Seed 11 Seed 22 Seed 33 Failed preset screening Wolff energy reference

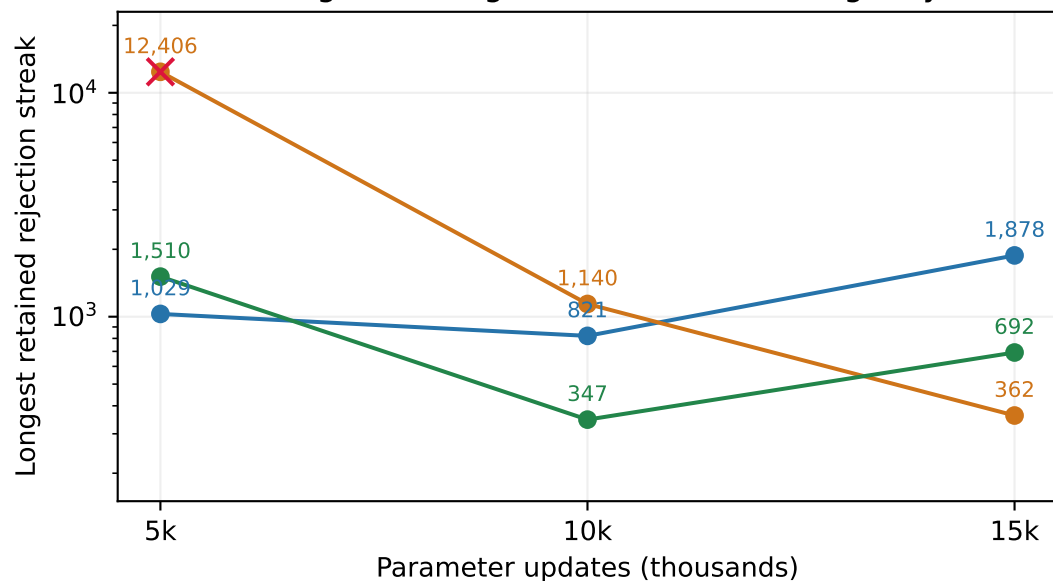

A. Acceptance is not monotonic in training budget

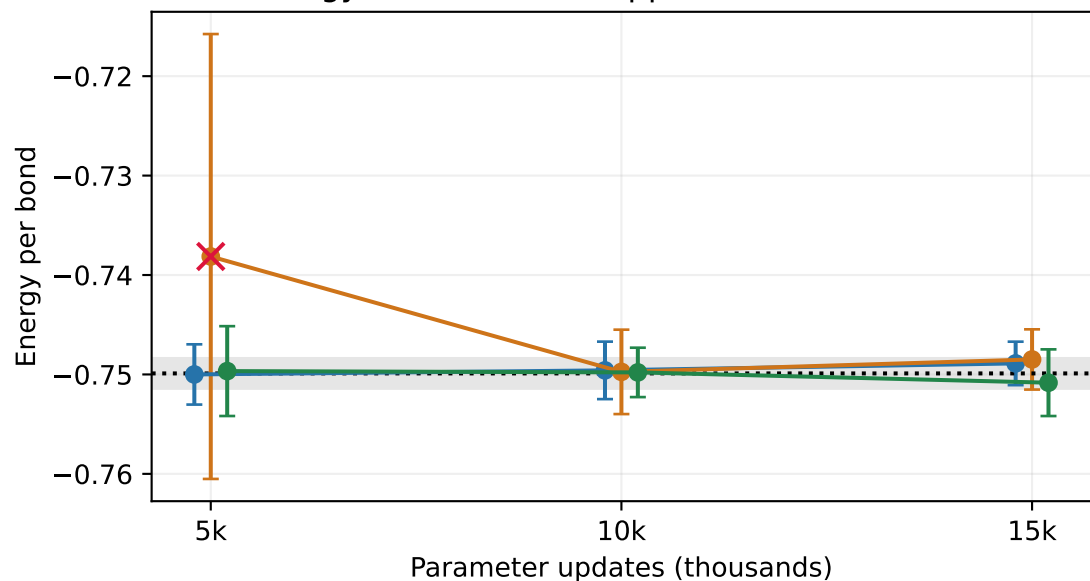

B. Seeds 11/22 improve; seed 33 drops after 10k

C. Longer training does not remove long stays

D. Energy estimates and approximate 95% intervals

N=32 is the same illustrative subset used previously; all 27 settings are saved in CSV/JSON.
Failed-case ESS / intervals are provisional. ESS/s excludes training; no convergence or mixing proof.
